x cannot lie in the interior of the feasible set. Next, for all $x \in L_1 \cap L_2$, $d = [1, 1]^T$ is a feasible direction. Therefore, $d^T \nabla f(x) = c_1 - c_2 < 0$. Hence, by FONC, the optimal solution x cannot lie in $L_1 \cap L_2$. Lastly, for all $x \in L_3$, $d = [1, 1]^T$ is a feasible direction.

Robust optimization approach is introduced for solving optimization problems with uncertain parameters, for which probability distribution functions are not required. Uncertainty sets, which have set structure, are utilized for modeling the problems with robust optimization to determine the probable uncertain parameters.
