Create a database name "phpcrud" After that, Create a table named "users" with 3 rows. id int (11) NOT NULL, name varchar (100) NOT NULL, email varchar (100) NOT NULL. Make Sure check on A. I. (auto increment) in "id" section when you create.

CRUD PHP MySQL Example and Source Code | With Ajax No ...

The comparison of the database-oriented CRUD operations to the HTTP methods has some flaws. Strictly speaking, both PUT and POST can create and update resources; the key difference is that contrary to POST, PUT is idempotent, meaning that multiple identical requests should have the same effect as a single request. Consequently PUT is a "replace" operation, which one could argue is not "update".

Create, read, update and delete - Wikipedia

It binds the two together like glue, creating a set of CRUD endpoints with just a couple lines of code. First, you initialize Epilogue with the Express app and the Sequelize database model. Next, you tell it to create your endpoints for the Post model: one for a list of posts, which will have POST and GET methods; and one for individual posts ...
