We have a 1999 Winnebago with a Cummins 5.9 ISB engine, in a Freightliner chassis. My oil pressure indicator is in a Freightliner dash assembly, and my guage has no numbers, just an Arc with the word NORMAL. I have no idea what the real pressure is just that it fluctuates anywhere from the bottom of the N to mid range or R.

There was no way to know if the lift pump had failed without a manual pressure gauge. Later, lift pump kits became available to add a "dummy" light to the system which would illuminate if the pressure dropped below 3.5 psi. The ISB engine is still used in many areas, although the 5.9 Cummins can now be replaced by the 6.7 Cummins.

It's been about 10thousand miles since my last oil change in my 2009 ISX and I just started getting some low oil readings to. I just changed my exhaust back pressure sensor a week or so ago and that's been helping greatly. When I accelerate or am at cruising speeds of 1200-1300 rpm's my oil pressure is fine, reading about 35-40 psi.
