The concepts of stability in probability of nontrivial solutions for  
stochastic nonlinear systems are analyzed in terms of a control  
Lyapunov function which is smooth except possibly at the origin.  
We show under certain hypothesis that the neighborhood of the  
origin is stable in probability. An illustrating example is provided.

In this paper we discuss existence and uniqueness for a one-dimensional time inhomogeneous stochastic differential equation directed by an  $\mathbb{F}$ -semimartingale  $M$  and a finite cubic variation process  $\xi$  which has the structure  $Q+R$ , where  $Q$  is a finite quadratic variation process and  $R$  is strongly predictable in some technical sense: that condition implies, in particular, that  $R$  is weak ...
